Resend API

I have built a complete, production-ready restaurant platform from the ground up — covering everything from an animated consumer storefront and multi-language support to a fully-featured admin dashboard. Below you will find a detailed breakdown of every feature I delivered, along with live links so you can explore the work yourself.

Full-Stack Web Developer

Next.js · React · Supabase · TypeScript · Tailwind CSS
Available for immediate start · Delivered on schedule

What I Built

A complete full-stack solution with consumer-facing storefront and operator admin dashboard.

Hero & Storefront

- Animated hero with kaiten ring visual
- Marquee banner for announcements
- Featured dishes showcase
- About section with chef spotlight
- Reservation call-to-action block

Menu & Cart

- Category-filtered menu grid
- Real-time availability checks
- Item detail modal with images
- Fly-to-cart animation on add
- Persistent cart drawer (Context API)

Reservations System

- Table booking form with time slots
- PostgreSQL EXCLUDE constraint (no double-booking)
- Guest management tokens (manage/cancel via email l...)
- Admin calendar view
- Status workflow: pending → confirmed → completed

Orders & Checkout

- Pickup & delivery order types
- Loyalty points redemption at checkout
- Animated success confirmation screen
- Order history with live status updates
- Auto-fill from auth profile

Auth & Profiles

- Email/password signup & login
- Google OAuth integration
- Forgot / reset password flows
- Editable profile with avatar
- Loyalty points balance display

Admin Dashboard

- Real-time KPI cards (revenue, orders, tables)
- Menu CRUD with sold-today counter
- Reservation calendar & status updates
- Live order feed
- User management panel

Technical Excellence

Browser

React / Next.js
Client Components

App Router

Server Components
Server Actions

Supabase

Auth · DB · Storage
Real-time

Resend

Email
Transactional

Internationalization

3 Languages
Uzbek, English, Russian

Cookie-based
No URL routing needed

DB content
name_uz / name_ru / name_en columns

Type-safe
satisfies guard fails build on missing key

Server + Client
getT() / useLanguage() hooks

Design System

Dark-first
data-theme="dark" strategy

CSS tokens
--sg-ink, --sg-red, --sg-cream

Typography
Anton (display) · Manrope (body)

Animations
transform + opacity only, expo easing

Seigaiha BG
Japanese wave pattern CSS motif

Security & Auth

Middleware
Session refresh on every request

Route guard
Protected pages redirect to login

Role-based
admin role enforced server-side

Google OAuth
One-click social sign-in

Server Actions
Mutations never exposed as API routes

Why I'm the Right Fit

01

I Deliver Complete Products

This isn't a template or a starter kit. SushiGO is a fully custom-built platform with every layer: database schema, server actions, UI components, admin tools, auth flows, and multi-language support — all written from scratch.

02

SEO & Performance Ready

Built on Next.js 14 App Router with Server Components, meaning pages are pre-rendered and search-engine friendly out of the box. Images are optimised via Next/Image, and routes are code-split automatically.

03

Mobile-First Responsive Design

Every page is built mobile-first with Tailwind CSS. The design is hand-crafted — no component library dependencies — giving full visual control and a unique brand identity.

04

Clean, Maintainable Code

TypeScript strict mode throughout. Path aliases, consistent naming conventions, and a clear separation of concerns (Server Actions for mutations, shared Supabase client helpers, typed DB interfaces).

05

I Can Update OR Rebuild

Whether you want to enhance your existing site or start fresh with a modern stack, I have proven experience doing both. I can audit your current platform and propose the most cost-effective path forward.
