WEB DEVELOPMENT

Proposal

I design and build fast, responsive, SEO-ready websites and web apps.

Prepared for your project · 2026

01 Understanding what you need

You're looking for a developer to **either refresh your existing website or build a new one** — with a polished, responsive design, real attention to user experience, and search-engine optimization baked in. Here's how I map to each requirement, and proof I've delivered exactly this kind of work.

1

Update or build new

Either enhance your current platform's functionality & aesthetics, or craft a fresh site aligned to your brand — your call, I'm set up for both.

2

Visually appealing layout

Clean visual hierarchy, considered typography and spacing, and a design that reflects your brand identity.

3

Mobile responsive

Fluid, mobile-first layouts that look right on phones, tablets and desktop — tested across breakpoints.

4

SEO optimized

Semantic markup, fast load times, metadata, Open Graph, sitemaps and Core-Web-Vitals tuning.

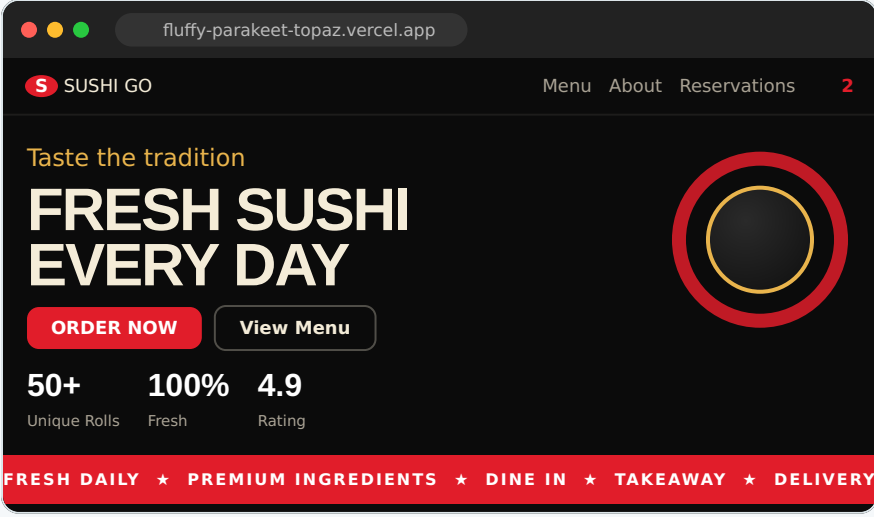

5

Strong UX

Intuitive navigation and conversion-focused flows, informed by how real users move through a site.

02 Proof of work

Two production builds that demonstrate end-to-end delivery — design, responsive front-end, database, auth, and an admin back-office.

Featured project

Sushi GO — full-stack restaurant platform

A complete ordering, reservation and management platform for a sushi cafe (Namangan, Uzbekistan). Customer-facing site and a real admin dashboard.

- Online menu + cart with fly-to-cart animation & checkout (pickup/delivery)
- Real-time table reservations with availability & double-booking prevention
- Accounts, Google sign-in, loyalty tiers, order & booking history
- Admin dashboard: orders, reservations, menu, tables & users (live updates)
- Email confirmations, rate-limiting, role-based access & dark-mode UI

Next.js 14

React 18

TypeScript

Tailwind

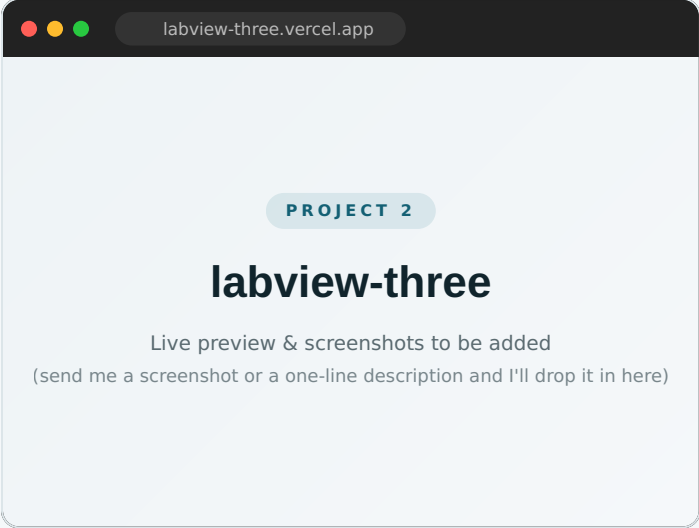

Supabase

Server Actions

Resend

Vercel

Project two

labview-three

A second live build deployed on Vercel. Add a short description and a screenshot and this section will showcase it alongside the work above.

- Live & deployed — **labview-three.vercel.app**
- Responsive front-end with a modern, branded layout
- [Add 2-3 highlight features here]

React / Next.js

03 How I'll approach your project

A clear, low-risk process with visible progress at every stage — no black boxes.

- 1 Discovery** Goals, brand, content and references. We agree scope: refresh vs. new build.
- 2 Design** Wireframe → visual design of key pages, aligned to your brand identity. You review before code.
- 3 Build** Responsive, accessible front-end with clean, maintainable code. Staged preview links throughout.
- 4 SEO & speed** Semantic markup, metadata, performance and Core Web Vitals — built in, not bolted on.
- 5 Launch & support** Deploy, QA across devices, hand-off docs, and a support window after go-live.

Why work with me

End-to-end

Design, front-end, database, auth and deployment — one accountable partner.

SEO & performance

Fast, crawlable, and tuned for Core Web Vitals from day one.

Responsive by default

Mobile-first; tested on real breakpoints, not just a desktop preview.

Clear communication

Frequent preview links, plain-English updates, on-time delivery.

LET'S BUILD IT

Ready to start when you are.

Tell me whether you'd like to **refresh the current site** or **start fresh**, share any brand assets or references, and I'll come back with a tailored scope, timeline and fixed quote.

- 1 Quick call / message to align on scope
- 2 I send timeline + fixed-price quote
- 3 Design preview within the first week
